# INTRODUCTION

**CV Rollers (TPP) Limited specialises in high quality products based on plastic bearings, plastic injection moulding and CNC machining.**

Products are developed using our in-house design incorporating SolidWorks which allows us to work alongside our customers to achieve high quality and bespoke products within the following industries:

- Truck and Trailer Manufacture and Repair Components
- Specialist Food Conveyors
- Load Securing Solutions
- Fire and Rescue Vehicle Storage and Components
- Utility Vehicle Storage
- Bespoke Storage

We pride ourselves in our exceptional customer service and high levels of quality to meet the requirements of modern manufacturing.

# SLIDE & CARRY

**The Slide & Carry System is designed to take all the daily stress out of Load Securing for modern day Logistic Businesses.**

The Load restraints are fitted to the trailer roof and can be moved up and down the load space with ease from ground level, and from either side of the trailer.

The system is available for Rigid, Articulated and Step Deck trailers. You can choose a large range of Load Restraints from straps to bespoke netting systems.

Slide and Carry allows your drivers to meet the DVSA securing guidelines and keep all users safe and compliant.

- A truly simple roof retractable load securing system.
- The emphasis is on ease of use.
- Improved collection and drop off speed.
- Sits less than two inches below the Henderson track fitted to the roof.
- Special clips to stop straps drooping when not in use.
- Will travel up and down trailer one at a time or altogether with very little effort.
- Simple one man operation.
- Step deck system has no tracks installed under lower shelf.
- Fully transferable when you change trailers.
- Step Deck Trailers - Side Nets for restraining loads on the top deck.

## SLIDE & CARRY

# STRAP SYSTEM

Standard strap systems are made up of 13 single straps that move independently up and down the trailer allowing you to secure individual pallets hassle free. Strap systems are good for all round applications.

System can be fitted in as little as 20 minutes per 44ft trailer.

## SLIDE & CARRY

# NET SYSTEM

Net systems are more specialised than strap systems and are best suited to applications such as bags, barrels or other unorthodox shaped loads. They are also well suited to delicate loads that strap systems may damage if over tightened.

## SLIDE & CARRY

# STEP DECK STRAP SYSTEM

The Slide & Carry Step Deck System is available to allow the driver to secure loads on two separate decks (top and bottom) from one single beam. This functions in the same way as a standard single beam but carries two load straps.

## SLIDE & CARRY

# KITES

Where extra protection for the load is required, we offer various kites that can spread the compression from the ratchet and strap as well as covering a larger surface area on the load. This is particularly useful for fragile cargo.

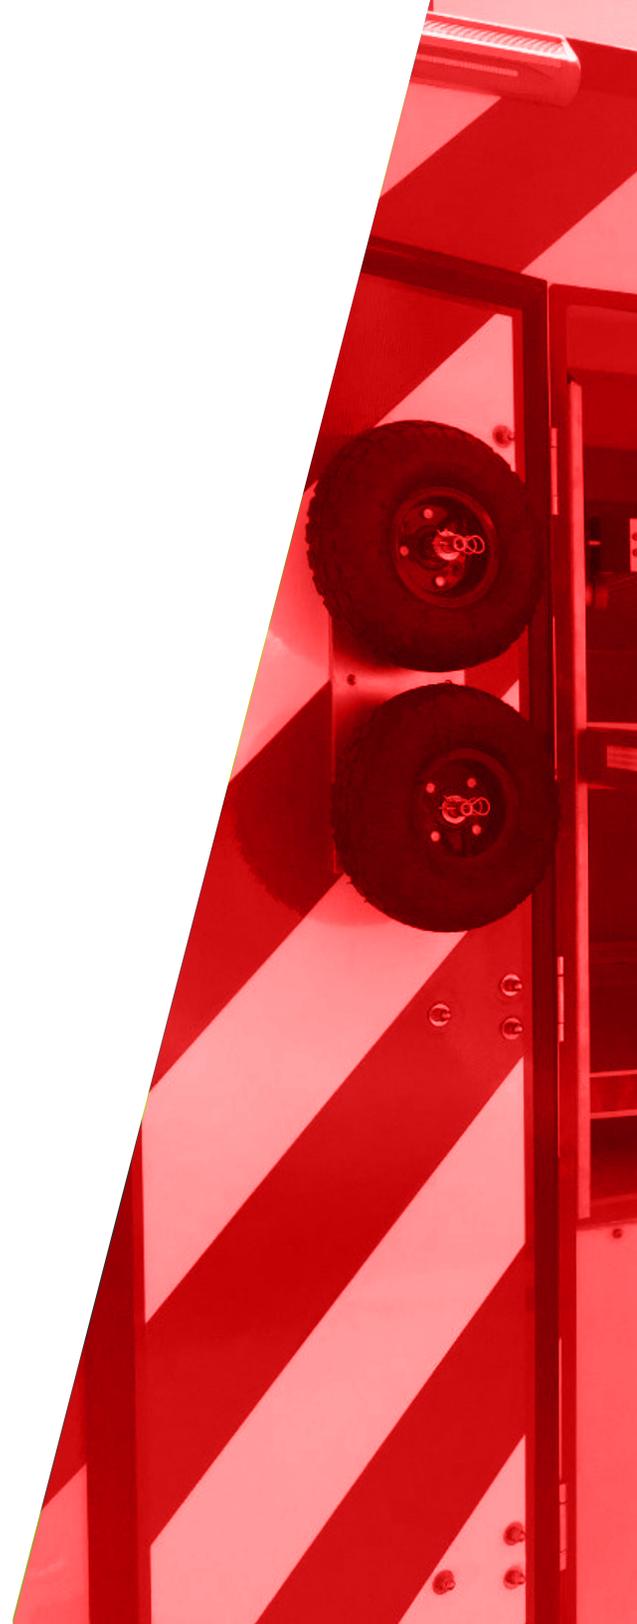

# SLIDE & TILT

**Slide & Tilt Ltd is the sister company of CV Rollers Ltd and specialises in heavy duty drawer systems and components for specialist vehicle storage.**

The emphasis of our UK manufacturing is based on efficiency for the end user, we use a simple customer ordering system to make bespoke drawer systems quick to purchase. We are now the recognised go to company in the UK for all Fire and Rescue Vehicle storage components.

Our built-up drawer systems offer massive savings to bodybuilders as our lightweight, heavy capacity drawers arrive completely assembled and take just minutes to fit.

We also offer various drawer systems for Pick ups and commercial vans which allow the end user to make the most of the available space in their fleet.

## SLIDE & TILT

# SLIDING DRAWER SYSTEM

- Up to 350kg load capacity
- One hand operation
- 100% extension
- Quick & easy to fit
- Maintenance free
- Corrosion resistant
- Bespoke sizes

## SLIDE & TILT

# SLIDE & TILT DRAWER SYSTEM

- Recommended 35kg load capacity
- Tested to 155kg
- One hand operation
- Tilt down towards operator
- Quick & easy to fit
- Maintenance free
- Corrosion Resistant
- Bespoke Sizes

## SLIDE & TILT

# DRAWER FRONT SLAM LOCK

The modern design of our Slam Lock is constructed from a tough and durable plastic body and stainless steel locking bars to withstand the harsh environment of Fire Appliance lockers. The system is very robust and manufactured to the highest standards allowing for quick no hassle installation.

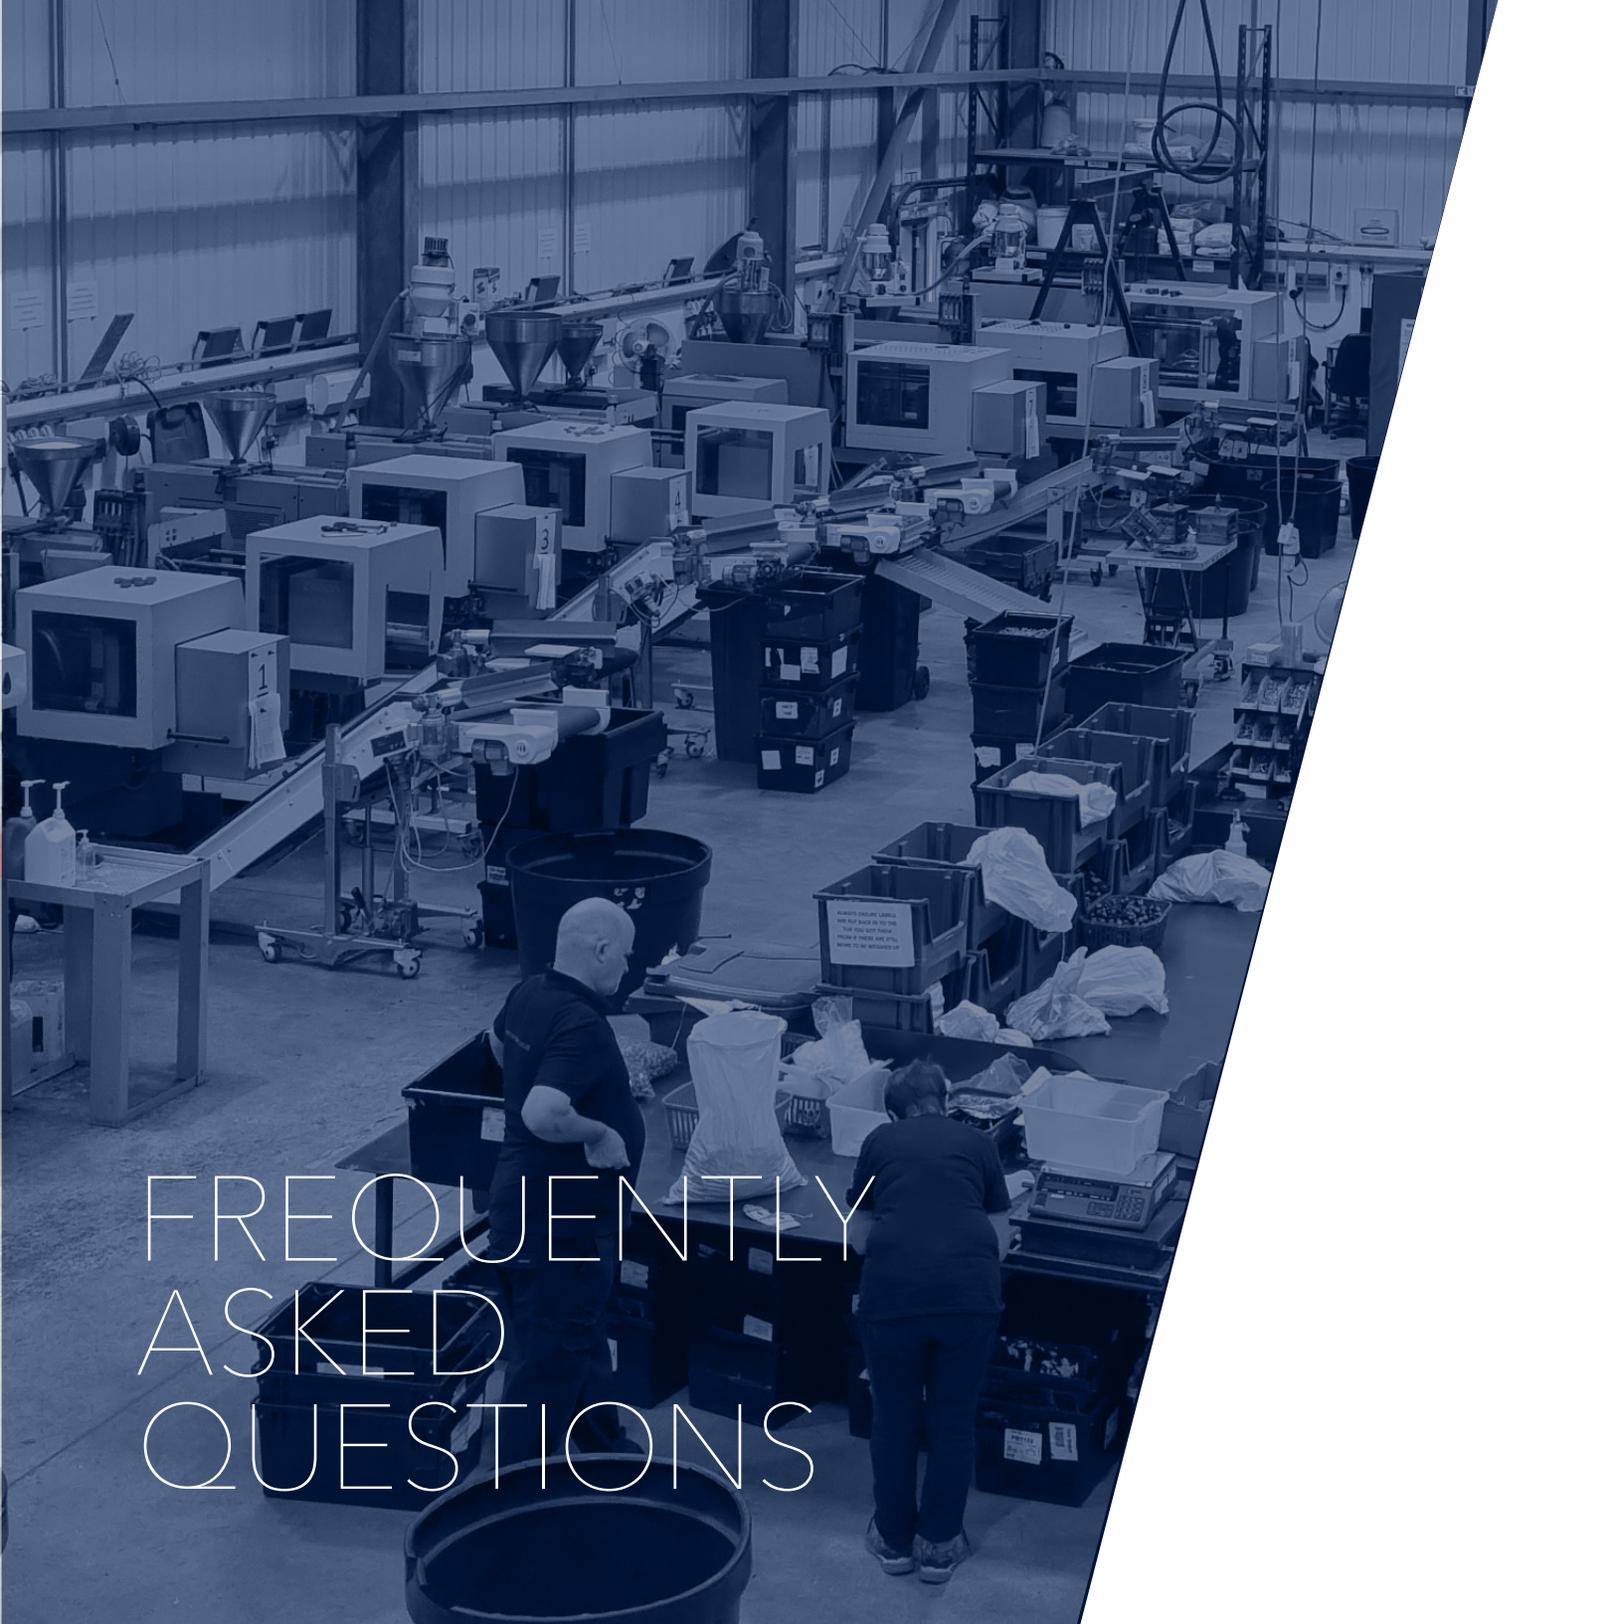

## SLIDE & TILT

# ALUMINIUM SLIDES

The modern Aluminium Heavy-Duty Slide offers superb performance and load ratings whilst being 70% lighter than conventional steel slides. This weight saving also offers increased load opportunity and fuel saving.

# FREQUENTLY ASKED QUESTIONS

## SLIDE & CARRY

### Why do I need straps I have never lost a load?

It is a requirement by Law to strap down unless the goods fall into the light-load category, failure to do so could result in a prohibition and fixed penalty.

### Do I need to climb on the trailer to use the system?

No, the system is operated from the ground.

### I have reinforced curtains; do I still need a system?

Not if the load fills the trailer from front to back, and the curtains are EN 12642 XL rated, if the load is multi stacked or part loaded then additional securing will also be required.

### Are Internal Cargo Straps not sufficient?

They can only be used if your pallets are less than 400kg.

### Is the system quicker than using conventional straps?

The time is dramatically reduced and allows for significantly more transit time each day, whilst keeping you safe.

### Is the system compliant with DVSA Guidance?

Yes, our systems when used correctly meet with all guidelines.

### Can the system be taken out of my trailer and reused?

Yes, in most cases as long the internal dimensions are the same or very similar.

## SLIDE & TILT

### What are the main products in your range?

We offer a wide range of components required to build heavy duty drawer systems for Fire and Rescue, and Commercial Vehicles.

### Do you make finished drawers?

Yes, we offer modular built drawer systems in a number of different designs i.e. straight pull out drawers, slide and tilt drawers, tool walls etc.

### I want to order a drawer but not sure how to?

We make this very simple; we need just two dimensions the width and the depth.

### Do you make the drawers and components yourself or are they imported?

We make all the components and the drawers at our Shropshire based factory using CNC and Moulding technology.

### What materials are used to make the drawers?

The drawers are made from aluminium along with engineered plastics and stainless steel. All materials are chosen for strength and corrosion resistance whilst remaining lightweight.

### How much weight can a drawer carry?

This varies depending on the design and size, our maximum load capacity (SWL) is 350kg.

### What skills are required to install the drawers?

No special skills are needed as all the engineering is done at the factory, most drawers are fitted with 4 nuts and bolts.

*Disclaimer: The above information is given as a guide only; you should always check the latest law applying to your loading application.*
